

GRADES 9 – 12

**1 PARTICIPANT
PER TEAM**

2 HOURS

Codeferno is a high-intensity coding competition designed to challenge participants to think critically and solve complex problems. At Codeferno, a carefully curated set of algorithmic challenges pushes participants to perform under tight timelines, compete with others, and realise that problems which appear simple can turn out to be deceptively complex—all while building real experience in a competitive programming environment.

CODEFERNØ—RULES OF PROCEDURE

The contest will be conducted on the Contest Management System (CMS), a platform used in Olympiad-level competitions, providing a professional contest environment.

1. Allowed Programming Languages:

- Python (3.12)
- C (11)
- C++ (17)
- Java (21)

2. Systems preloaded with VS Code, Sublime Text, and BlueJ will be provided.

3. AI-assisted features within these software are strictly prohibited.

4. **No external software or internet access is permitted during the contest.**

5. External devices are **not** permitted.

ROUND 1 — ELIMINATION ROUND

Duration: 30 minutes (+10 minute buffer if required)

- Participants will face two moderate-level problems featuring subtasks and partial scoring. This round is designed to test speed, accuracy and implementation under pressure.
- The top 5 participants will advance to Round 2, though the number of qualifiers may vary depending on registrations.

ROUND 2 — FINAL ROUND

Duration: 1 hour and 20 minutes

- Finalists will tackle three problems with subtasks and partial scoring.
- The round emphasises algorithmic thinking, optimisation and consistency under contest conditions.
- Final rankings and winners will be determined based on scores achieved in this final round.

CODEFERO—RULES OF PROCEDURE

Judging & Scoring

- Each problem carries 50, 100 or 150 points depending on the difficulty level of the question.
- Scores from the first round will also be taken into account while determining the winners.
- Problems are partially graded — points are awarded for each test case passed.
- No penalty for incorrect submissions
- There is no limit to the number of submissions participants can make.
- The highest-scoring submission for each problem will be considered.
- In the event of a tie, the participant who received the final score with a lower aggregate time will be given the higher ranking.

Execution Rules

- Programs must correctly read input, process it and produce output as specified.
- Each test file must be processed within the given time limit and memory limit specified in the problem statement.
- Solutions exceeding these limits will result in appropriate errors.
- If a file contains multiple test cases, all must be handled correctly.

Monitoring & Fair Play

- Strict invigilation throughout the competition will be ensured.
- Participants will be monitored for the Integrated Development Environment (IDE) and system usage.
- Use of unauthorised tools, including AI assistance, is strictly prohibited.
- Any form of collaboration, code sharing or use of unfair means will result in immediate disqualification.

CODEFERNØ—RULES OF PROCEDURE

Resources

For problem familiarisation and exposure to question types, participants are encouraged to visit:

- CSES Problem Set — <https://cses.fi/>
- Codeforces — <https://codeforces.com/>
- AtCoder — <https://atcoder.jp/>

Note:

The number of rounds and qualifiers may be adjusted based on total registrations. All decisions made by the organisers regarding scoring, rankings and any disputes will be binding. The rules are subject to change, with updates communicated through official channels.
